# 1.Practice - Scoring Bowling

Let's start with writing a program to calculate the score of a completed game of 10 pin bowling

#### Benefits of Tests

- 1. Specification
- 2. Feedback
- 3. Regression
- 4. Granularity

#### **Rules for Test Scenarios**

#### In the Past

The past already happened. No if's or conditionals, no branches.

Sam might go to a store sometime tomorrow.

Sam went to the video store at 11:15 yesterday

#### Start Simple

You are building complexity, don't start with it.

$$-3*5/4^2 = 0.9375$$
$$1+1=2$$

#### Specific Details

The devil is in the details. Make sure they are clear

Create a game board.

Create a crossword board that is 18 x 23

#### Happy Path

Sketch out the main things that can go right before focusing on what can go wrong

It's illegal to place a piece on an ...

Player 1 puts an X in the middle to win

#### Avoid Symmetry

Symmetry is a smell in test as you can easily get a false positive

Place a piece at (5,5).

*Place a piece at (4,5)* 

#### Reality is Optional

You only need to use realistic situations when they are also convenient. Otherwise, don't

# Practice – Drawing Test Scenarios

- 1. Minesweeper
- 2. Tic tac toe
- 3. Othello (reversi)
- 4. <mark>chess</mark>
- 5.
- 6.
- 7.
- 8.

- 11.
- 12.
  - 13. <mark>Sudoku</mark>
- 14.

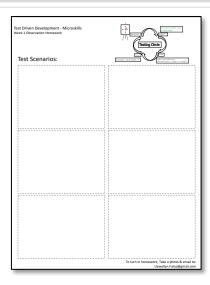

# 3. Practice – Triangles

- 1. A side has a distance
- 2. A side has endpoints
- 3. 3 points
- 4. 3 sides
- 5. Perimeter
- 6. Get Sides touching a point
- 7. Get sides opposite a point
- 8. The angle of 2 sides touching a point

- 9. 3 angles
- 10. Right Triangle

### Home work

Draw 6 test scenarios

thanks!
